Education

Whitman College

Bachelor of Arts in Computer Science

Expected May 2028

Walla Walla, WA

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Calculus I-IV, Physics

Technical Skills

Languages: Python, C++, Java, JavaScript/TypeScript, SQL (PostgreSQL, MySQL), Bash/Shell, HTML/CSS

ML/AI Frameworks: PyTorch, TensorFlow, LangChain, Scikit-learn, Pandas, NumPy, XGBoost

Backend & Data Engineering: FastAPI, Flask, Node.js, Express, GraphQL, Prisma, Redis, Kafka, Snowflake, REST APIs

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, GitHub Actions, CI/CD, Linux

Frontend: React, Next.js, Redux, Tailwind CSS, Vite, Figma

Tools: Git/GitHub, Jira, Postman, Vitest, Cypress, Agile/Scrum, Atlassian Forge

Projects

Poly Predictor Kit — 1st Place, QuackHacks 2025

GitHub

- Engineered an AI-powered Polymarket analytics platform that processed prediction-market events, comments, and market patterns using modular data pipelines.
- Developed a Gemini-based Market Insight system that generated event-level summaries, rationales, and actionable market context for users.
- Implemented an Emotional vs. Rational Comments Classifier using Gemini labels, Snowflake storage, TF-IDF features, and Logistic Regression.

PromptLock — AI Context Compression Platform, NexHacks

GitHub

- Built an AI context-compression platform that converts long logs, code diffs, documentation, and API content into budget-controlled prompt packs.
- Implemented task-aware compression modes for debugging, code review, build tasks, and documentation using FastAPI and token-based chunking.
- Developed a Next.js and TypeScript frontend with transparent compression metrics showing included, excluded, and prioritized context.

AI Visual Novel Creator — 1st Place AI Award, CodeDay 2025

GitHub

- Designed an AI-powered visual novel pipeline that generated story scenes, character dialogue, branching narrative structure, and playable Ren'Py scenes.
- Integrated AI image generation to create character and background assets for interactive storytelling workflows.
- Built a Python content pipeline that transformed generated story data into structured game-ready visual novel files.

Experience

R-Finance

Jun. 2026 – Present

AI/ML Engineering Intern

Remote

- Developed a FastAPI and YOLO11 computer vision service that validates vehicle photos submitted through a mobile auto-collateral loan application.
- Implemented batch photo analysis, passenger-vehicle eligibility checks, image-edit risk detection, and cross-photo consistency checks to identify invalid or mismatched submissions.
- Containerized and deployed the service using Docker, Kubernetes, and Helm, secured endpoints with API-key authentication, and maintained 31 automated tests.

Canva

Nov. 2025 – Dec. 2025

AI Design & Data Storytelling Extern

Remote

- Created AI-assisted storytelling workflows and presentation structures for user research, insight synthesis, and data communication.
- Built customer journey maps, interview guides, field notes trackers, and insight boards to organize findings into clear recommendations.
- Improved final recommendation decks by restructuring information hierarchy, reducing visual noise, and strengthening narrative flow.

Honors & Awards

Phi Theta Kappa Honor Society — Bellevue College

Hackathon Awards: 1st Place, Polymarket Track — QuackHacks 2025 | 1st Place AI Award — CodeDay Seattle 2025
